

US EPA ARCHIVE DOCUMENT

Docket Number: F-2001-PMLP-FFFFF
January 19, 2001

**Regulatory Flexibility Screening Analysis
for the Proposed Concentration-Based Listing of
Wastewaters and Non-wastewaters from the
Production of Paints and Coatings**

FINAL REPORT

APPENDICES TO REPORT

APPENDIX A

Recent Industry News Article Highlights

“BASF builds coatings plant, expands glycols.” C&EN 8 March 1999.

- BASF Corporation is building a powder coating plant at its Morgantown, N.C. site. “The 20 million-lb-per-year plant will start up in mid-2000, eventually increasing employment to 50 at the site.” Epoxies, acrylics, and hybrid technologies will be used to produce the coatings. In the end, BASF will be able to produce 925 million lbs of ethylene oxide and 860 million lbs of glycols.

“Dupont restructures coatings business.” C&EN 12 July 1999

- Dupont plans to restructure its performance coating business following its acquisition of Herberts. The plan includes a 9 percent reduction in staff. The moves are necessary to streamline operations and improve productivity. Combined, the two companies will be known as Dupont Performance Coatings making Dupont the world’s largest supplier of original equipment manufacture and aftermarket coatings and the third largest coatings company.

“PPG completes coatings purchase.” C&EN 9 August 1999.

- PPG Industries has completed the purchase of London base ICI’s automotive and industrial coatings businesses, as well as automotive solvent and thinner businesses in North America. By year end PPG will close on the purchase of ICI’s auto finish and industrial coatings business in Asia, excluding the Indian subcontinent. In a second deal, PPG acquired PRC-De Soto from Akzo Nobel. PRC-De Soto is a global supplier of coatings and sealants for aircraft.

“PPG rolls out auto primer system.” C&EN 16 August 1999.

- PPG Industries has introduced a new two-part electrodeposition process which will change the way vehicles are painted. The system includes a corrosion-inhibiting primer followed by a innovative antichip primer-surface coating. The new system will provide a richer coating and cost less than a traditional spray booth. The savings are gained through reduced energy use and labor requirements. In addition, the new process meets stringent environmental regulation by eliminating volatile organic compounds (VOCs).

“Business Roundup.” C&EN 15 March 1999.

- BF Goodrich purchased Mydrin textile coatings business of Bostik Ltd., a subsidiary of France’s Total. Goodrich was attracted to Mydrin because of its flame-retardant coatings business, which account for 40 percent of 1998 sales.

“Business Roundup.” C&EN 27 September 1999.

- Chemetall, a subsidiary of Dynamit Nobel, completed its purchase of Brent International. The acquisition will expand Chemetall surface treatment business.

“Business Roundup.” C&EN 25 January 1999.

- BASF Corporation is closing its solvent based automotive paint and coatings manufacturing facility in Detroit. The move will affect about 200 employees. The manufacturing of these products will move to other BASF Corp. facilities.

“PPG adds to coatings with Belgian buy.” C&EN 15 February 1999.

- In an effort to expand business in vehicle refinishes in Europe, PPG has acquired the commercial transport refinish coatings business of Sigma Coatings, a subsidiary of Petrofina. As part of the expansion, about 25 workers will be transferred to PPG.

“Business Roundup.” C&EN 13 April 1999.

- Ningbo Powder Coatings, a producers of heat fusible powder coatings located 100 miles south of Shanghai, plans to be sold to Cleveland-based Ferro.

“Valspar to buy Dexter’s packaging coatings business.” C&EN 31 August 1999.

- Minneapolis-based Valspar Corporation will acquire Windsor Locks, Connecticut based Dexter’s packaging coatings business. With operations in more than 12 countries, Dexter’s packaging operations produce coatings for beverages and aerosol cans. The purchase of Windsor highlights Valspar’s strategy to expand into Europe and other international markets.

“PPG to buy coatings business in Australia.” C&EN 31 August 1999.

- In an effort to build its presence in the southern Pacific region, PPG has struck a deal with Orica to purchase its automotive and industrial coatings business. The deal will give PPG manufacturing, office, laboratory, warehouse facilities, and approximately 600 employees. Coatings accounted for 40 percent of PPG total sales in 1997.

“Hoechst to sell its coatings business” C&EN 24 August 1998.

- Hoechst is selling its coatings subsidiary, Herberts, to the investment firm Kohlberg, Kravis, Roberts, and Company and Herberts’ managers for \$1.7 billion. The proceeds will be used to pay off company debt.

“Hoechst coating going to Dupont” C&EN 2 November 1998.

- Just days after the investment firm Kolberg, Kravis, Roberts, and Company agree to purchase Herberts, the coatings subsidiary of Hoechst, the agreement was dropped because the price was starting to look too high. In the wake of the deal powerhouse Dupont agreed to purchase the coating company and its affiliates.

“Akzo Nobel Buys Coatings.” Chemical Market 7, August 2000.

- Akzo Nobel will double its aerospace coatings business through the acquisition of Dexter Corporation’s aerospace and specialty coatings business. The acquisition has significantly strengthened Akzo Nobel’s position in the coatings market.

“Valspar to acquire Lilly Industries” Chemicalweek 7 July 2000.

- Valspar Industries will acquire paint maker Lilly Industries, based in Indianapolis. The transaction is valued at approximately 975 million dollars. The merger will allow Valspar to offer a broader selection of products to its customers and create greater value for its shareholders. The merger is anticipated to close by the end of the year.

“Scanning Kelvin Probe Promises Corrosion Revolution” Paint and Coatings 22 August 2000.

- The Scanning Kelvin Probe, developed by CSIRO Sustainable Materials Engineering (CSME), is a new scientific instrument which promises to unveil corrosion secrets. This new scientific tool discovers the whole process of corrosion by capturing of the electrochemical reactions which occur during corrosion. This development could significantly reduce the cost of fixing rusty cars or maintaining bridges.

“ICI Canada Partners with EnviroCoatings, Inc.” Paint and Coatings 4 August 2000.

- ICI Canada Partners will team up with EnviroCoatings to distribute Ceramic InsulCoat R:E Paint and Coating Systems, a high performance paint and coatings product family. This partnership benefits EnviroCoatings by providing them access to a well established sales and distribution unit and the interaction with the world’s leading paint industry.

Note: C&EN = Chemical and Engineering News

APPENDIX B

1995 and 1997 Biennial Report Data Query Algorithm

Solvent Cleaning Wastes

- Sort based on SIC Code, Source Code and Form Code.
- Keep all records containing SIC Code = 2851, Source Code = A09 (cleanout process equipment), Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup) and Form Codes = B201 through B204, B207, B209, B211)

Caustic Cleaning Wastes:

- Sort based on SIC Code and Source Code.
- Keep all records containing SIC Code = 2851 and Source Code = A03 (caustic cleaning) or A09 (cleanout process equipment), Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup) and Form Codes = B106 - B110

Aqueous Cleaning Wastes:

- Sort based on SIC Code, Source Code and Form Code.
- Keep all records containing SIC Code = 2851 and Source Code = A09 (cleanout process equipment), Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup) and Form Codes = B101, B102, B113, B114, B115

Wastewater Treatment Sludge

- Sort based on SIC Code, Source Code and Form Code.
- Keep all records containing SIC Code = 2851, Source Code = A71 (filtering/screening), A75 (wastewater treatment), or A76 (sludge dewatering), Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup), 3 (derived from the management of a non-hazardous waste), or 5 (residual from on-site TDR of a previously existing hazardous waste) and Form Codes = B301 through B609

Emission Control Dust

- Sort based on SIC Code and Source Code.
- Keep all records containing SIC Code = 2851, Source Code = A78 (air pollution control devices), and Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup), 3 (derived from the management of a non-hazardous waste), or 5 (residual from on-site TDR of a previously existing hazardous waste).

Off-specification Production Wastes:

- Sort based on SIC Code, Source Code and Form Code.
- Keep all records containing SIC Code = 2851, Source Code = A57 (discarding off-spec material) or A58 (discarding out-of-date products or chemicals), and Origin Code = 1 (generated on site from a production process, service activity, or routine cleanup), and Form Code = B001, B003, B004, B009, B101, B102, B113, B201, B202, B203, B204, B207, B209-B212, B219, B315, B316, B403, B405, B409, B604, or B606.

APPENDIX C

Comparison of Model Facility Waste Generation Rates with 1997 BRS Waste Generation Statistics *					
Model Facility (employees)	Solvent Cleaning Waste	Water/Caustic Cleaning Waste	WWTS	Emission Control Dust	Off Spec Product
<i>Model Facility Waste Generation Estimates**</i> (tons of waste generated per year per facility)					
10	9.5	7.3	3.0	0.6	2.2
50	58.0	45.0	18.6	3.5	13.4
150	214.0	164.0	68.4	13.0	49.4
300	456.0	349.0	145.6	27.6	105.2
1997 BRS Waste Generation Statistics					
Number of Facilities Reporting	254	20	8	22	181
Total Waste (tons/year)	45,521.0	1,795.0	71.2	232.1	17,388.0
Mean (tons/year/facility)	179.2	89.8	8.9	10.6	96.1
Waste Generation Percentiles (tons of waste generated per year per facility)					
10%	4.3	1.5	0.2	0.2	0.6
25%	16.9	13.4	1.4	0.2	4.7
50%	56.1	33.7	3.0	0.2	15.7
75%	180.3	64.8	16.6	7.7	64.7
90%	382.3	223.6	22.6	19.8	244.6
* BRS data are limited to a generally small number of firms, all of which are large quantity generators (as are the model facilities). Accordingly, some direct comparisons of the model facility estimates and the BRS data can be made to gain a sense of the validity of the estimates.					
** Model facility waste generation estimates based on waste generation ratios presented in Table 4-1.					

APPENDIX D WASTE MANAGEMENT BASELINE AND COMPLIANCE UNIT COST ESTIMATES (1999 DOLLARS) FOR NONWASTEWATERS (PROPOSED AS K179)

APPENDIX D
WASTE MANAGEMENT BASELINE AND COMPLIANCE UNIT COST ESTIMATES (1999 DOLLARS) FOR NONWASTEWATERS (PROPOSED AS K179)

Waste	Baseline Management Practice	Baseline Unit Cost*	Compliance Management Practice	Compliance Unit Cost*
	Subtitle C Cement Kiln (bulk)	\$116/drum \$2.11/gal \$507/metric ton ¹¹	Same as baseline. For sensitivity analysis assume: Incineration (bulk) and Ash Solidification and Subtitle D Landfill (bulk)	Assuming 25% ash: \$2.99/gal + 0.25 * \$0.40/gal = \$3.09/gal \$716/metric ton ⁵ + 0.25 * \$96/metric ton ⁶ = \$740/metric ton

Notes to Appendix D: NA = Not Applicable; sp. gr. = specific gravity (average value reported in RCRA 3007 Survey); All drums are 55 gallon.

* Transportation costs need to be added to the unit costs. They already are incorporated into the Subtitle D landfill unit costs. ECHOS reported transportation costs to be \$0.01875/drum/mile and \$0.09/metric ton/mile with a minimum of \$683 per shipment; however this minimum charge appears unrepresentative based on contacts with industry and a minimum charge of \$300 is applied. Assume 50 miles to the nearest off-site nonhazardous wastewater treatment facility, 200 miles to the nearest Subtitle C landfill, hazardous wastewater treatment facility, and nonhazardous fuel blender/cement kiln and 300 miles to the nearest Subtitle C incinerator and fuel blender/cement kiln. Costs per ton mile are approximately \$0.13 for bulk wastes for a 200 mile haul; \$0.12 for a 300 mile haul. Under the compliance scenario, for LQGs assume a 90-day waste accumulation period and for SQGs assume a 180-day waste accumulation period. For facilities currently shipping solid and liquid paint wastes to off-site wastewater treatment facilities that use impoundments assume the facilities will ship to another WWTF that uses tanks located 100 miles further away.

Also, the cost for stabilized waste sent to a Subtitle D landfill equals approximately \$107/metric ton accounting for the residual increase of 1.5 from stabilization (ref. *Assessment of the Potential Costs and Benefits of the Hazardous Waste Identification Rule for Industrial Process Wastes, as Proposed*, May 25, 1995). This is equivalent to the unit cost of a non-stabilized waste sent to a Subtitle C landfill of approximately \$108/metric ton. Therefore, no incremental landfill disposal savings/costs are included for stabilized ash disposed in a Subtitle D landfill under compliance.

1. Environmental Cost Handling Options and Solutions (ECHOS), *Environmental Remediation Cost Data-Unit Price*, 5th Annual Edition, published by R.S. Means, 1999, Assembly #33 19 7205 (for the remainder of the notes only the final four digits, e.g., #7205 will be reported for this source). In 1999 R.S. Means, an “assembly” is an index number for the record (line item) in the book containing the unit price for this activity.
2. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; drum unit price for pumpable sludge.
3. #7205 (\$75/drum) + the stabilization cost (\$38/drum) reported for hazardous waste in Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; \$118/drum with stabilization - \$80/drum without stabilization = \$38/drum.
4. #7269 (\$64.47/ton)
5. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; bulk unit price for pumpable sludge.
6. #7269 (\$64.67/ton) + the stabilization cost (\$87/ton) reported for hazardous waste in Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; \$185/ton with stabilization - \$98/ton without stabilization = \$87/ton (\$96/metric ton).
7. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; drum unit cost estimate.
8. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; bulk unit cost estimate.
9. #7303; Published unit costs were available for bulk shipments. Assumed drum unit costs are 50 percent higher than the bulk unit costs to account for the additional handling costs.
10. #7302; Published unit costs were available for bulk shipments. Assumed drum unit costs are 50 percent higher than the bulk unit costs to account for the additional handling costs.
11. Memorandum: Costs of the Phase IV LDRs on MGP Wastes, January 1998. Inflated to 1998 dollars assuming a 2.5% inflation rate.

For sensitivity analysis assume: Incineration (drum) and Ash Solidification and Subtitle C Landfill (bulk)	Assuming 5% ash: $\$2.25/\text{gal} + 0.05 * \$0.77/\text{gal} = \$2.29/\text{gal}$ $\$594/\text{metric ton} + 0.05 * \$204/\text{metric ton}^1 = \$604/\text{metric ton}$
	Fuel Blending and Subtitle C Cement Kiln (bulk)	\$1.92/gal \$507/metric ton ³	Same as baseline. For sensitivity analysis assume: Incineration (bulk) and Ash Solidification and Subtitle C Landfill (bulk)	Assuming 5% ash: $\$0.59/\text{gal}^6 + 0.05 * \$0.77/\text{gal} = \$0.63/\text{gal}$ $\$155/\text{metric ton} + 0.05 * \$204/\text{metric ton}^1 = \$165/\text{metric ton}$
	On-Site Subtitle C Treatment Tank and On-Site Wastewater Treatment Facility	NA	Same as baseline. Exempt from listing.	NA
	POTW	NA	Same as baseline. Exempt from RCRA because regulated under Clean Water Act.	NA
	NPDES	NA	Same as baseline. Exempt from RCRA because regulated under Clean Water Act.	NA
	Off-Site Subtitle D or C Wastewater Treatment (drum or bulk)	NA	Same as baseline. Exempt from listing.	NA

APPENDIX E WASTE MANAGEMENT BASELINE AND COMPLIANCE UNIT COST ESTIMATES (1999 DOLLARS) FOR WASTEWATERS (K180)				
Waste	Baseline Management Practice	Baseline Unit Cost*	Compliance Management Practice	Compliance Unit Cost*
Caustic Cleaning Liquids sp. gr. = 1.0	Subtitle C Incineration (drum)	\$124/drum ⁶ \$2.25/gal \$594/metric ton	Incineration (drum) and Ash Solidification and Subtitle C Landfill (bulk)	Assuming 5% ash: \$2.25/gal + 0.05 * \$0.77/gal = \$2.29/gal \$594/metric ton + 0.05 * \$204/metric ton ¹ = \$604/metric ton
	Subtitle C Incineration (bulk)	\$0.59/gal ⁶ \$155/metric ton	Incineration (bulk) and Ash Solidification and Subtitle C Landfill (bulk)	Assuming 5% ash: \$0.59/gal ⁶ + 0.05 * \$0.77/gal = \$0.63/gal \$155/metric ton + 0.05 * \$204/metric ton ¹ = \$165/metric ton
	On-Site Non-Hazardous Treatment Tank	NA	Same as baseline. Exempt from listing.	NA
	POTW	NA	Same as baseline. Exempt from RCRA because regulated under Clean Water Act.	NA
	Off-Site Subtitle C Wastewater Treatment (drum or bulk)	NA	Same as baseline. Exempt from RCRA if managed in tanks regulated under Clean Water Act.	NA

APPENDIX E
WASTE MANAGEMENT BASELINE AND COMPLIANCE UNIT COST ESTIMATES (1999 DOLLARS) FOR WASTEWATERS (K180)

Waste	Baseline Management Practice	Baseline Unit Cost*	Compliance Management Practice	Compliance Unit Cost*
-------	------------------------------	---------------------	--------------------------------	-----------------------

Notes to Appendix E: NA = Not Applicable; sp. gr. = specific gravity (average value reported in 1998 RCRA 3007 Survey); All drums are 55 gallon.

* Transportation costs need to be added to the unit costs. ECHOS reported transportation costs to be \$0.01875/drum/mile and \$0.09/metric ton/mile with a minimum of \$683 per shipment; however this minimum charge appears unrepresentative based on contacts with industry and a minimum charge of \$300 is applied. Assume 50 miles to the nearest off-site nonhazardous wastewater treatment facility, 200 miles to the nearest Subtitle C landfill, hazardous wastewater treatment facility, and nonhazardous fuel blender/cement kiln and 300 miles to the nearest Subtitle C incinerator and fuel blender/cement kiln. Costs per ton mile are approximately \$0.13 for bulk wastes for a 200 mile haul; \$0.12 for a 300 mile haul. Under the compliance scenario, for LQGs assume a 90-day waste accumulation period and for SQGs assume a 180-day waste accumulation period. For facilities currently shipping solid and liquid paint wastes to off-site wastewater treatment facilities that use impoundments assume the facilities will ship to another WWTF that uses tanks located 100 miles further away.

Also, the cost for stabilized waste sent to a Subtitle D landfill equals approximately \$107/metric ton accounting for the residual increase of 1.5 from stabilization (ref. *Assessment of the Potential Costs and Benefits of the Hazardous Waste Identification Rule for Industrial Process Wastes, as Proposed*, May 25, 1995). This is equivalent to the unit cost of a non-stabilized waste sent to a Subtitle C landfill of approximately \$108/metric ton. Therefore, no incremental landfill disposal savings/costs are included for stabilized ash disposed in a Subtitle D landfill under compliance.

1. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; used bulk unit cost estimate (\$185/ton for Subtitle C landfill with stabilization, \$98/ton for Subtitle C landfill without stabilization, and \$87/ton for stabilization).
2. Environmental Cost Handling Options and Solutions (ECHOS), *Environmental Remediation Cost Data-Unit Price*, 5th Annual Edition, published by R.S. Means, 1999, Assembly #33 19 7303. Published unit costs were available for bulk shipments. Assumed drum unit costs are 50 percent higher than the bulk unit costs to account for the additional handling costs.
3. Memorandum: Costs of the Phase IV LDRs on MGP Wastes, January 1998. Inflated to 1998 dollars assuming a 2.5% inflation rate.
4. Environmental Cost Handling Options and Solutions (ECHOS), *Environmental Remediation Cost Data-Unit Price*, 5th Annual Edition, published by R.S. Means, 1999, Assembly #33 19 7214 (\$135/drum).
5. Environmental Cost Handling Options and Solutions (ECHOS), *Environmental Remediation Cost Data-Unit Price*, 5th Annual Edition, published by R.S. Means, 1999, Assembly #33 19 7214 (\$135/drum) + the stabilization cost (\$38/drum) reported for hazardous waste in Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; \$118/drum with stabilization - \$80/drum without stabilization = \$38/drum.
6. Hazardous Waste Resource Center - January 2000 Incinerator and Landfill Cost Data, <http://www/etc.org/costsurvey3.cfm>; Used drum unit price for non-halogen liquid.

APPENDIX F

REPRESENTATIVE FACILITY COMPUTATIONAL TABLES

(Data Source for Appendix F Tables: RCRA 3007 Survey data and cost data from Appendix Tables D and E)

DESCRIPTION OF CODES APPLIED IN THE TABLES:**NONWASTEWATERS:**

HCS	Hazardous Caustic Sludge
HED	Hazardous Emission Control Dust
HOR	Hazardous Off-Specification Product
HSS	Hazardous Solvent Sludge
HWS	Hazardous Wastewater Sludge
NCS	Nonhazardous Caustic Sludge
NED	Nonhazardous Emission Control Dust
NOR	Nonhazardous Off-Specification Product
NSS	Nonhazardous Solvent Sludge
NWS	Nonhazardous Wastewater Sludge
NWTS	Nonhazardous Wastewater Treatment Sludge

WASTEWATERS:

HCL	Hazardous Caustic Liquid
HSL	Hazardous Solvent Liquid
HWL	Hazardous Wastewater Liquid
NCL	Nonhazardous Caustic Liquid
NSL	Nonhazardous Solvent Liquid
NWL	Nonhazardous Wastewater Liquid

¹

¹ Model facility weighting is expressed to up to four decimal places

² Numbers may not add due to rounding

³ Unweighted total times weighting factor to arrive at the sample universe total

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the universe total

⁵ The wastewater generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual (HCL), Hazardous Solvent Cleaning Residual (HSL), Hazardous Water Cleaning Residual (HWL), Nonhazardous Caustic Cleaning Residual (NCL), Nonhazardous Solvent Cleaning Residual (NSL), Nonhazardous Water Cleaning Residual (NWL).

¹ Model facility weighting factor is expressed up to four decimal places

² Numbers may not add due to rounding

³ Unweighted total times weighting factor to arrive at the sampling universe

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the industry total

⁵ The solid waste generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual Sludge (HCS), Hazardous Emission Control Dust (HED), Hazardous Off-Specification Production Residual (HOR), Hazardous Solvent Cleaning Residual Sludge (HSS), Hazardous Water Cleaning Residual Sludge (HWS), Nonhazardous Caustic Cleaning Residual Sludge (NCS), Nonhazardous Emission Control Dust (NED), Nonhazardous Off-Specification Production Residual (NOR), Nonhazardous Solvent Cleaning Residual Sludge (NSS), Nonhazardous Water Cleaning Residual Sludge (NWS), Nonhazardous Wastewater Treatment Sludge (NWTS).

¹ Model facility weighting factor is expressed up to four decimal places

² Numbers may not add due to rounding

³ Weighted total is unweighted total times 0.5 plus unweighted total for baseline times 0.5 (to account for the wastes that are not hazardous and managed the same as under baseline) and then multiplied by the weighting factor to arrive at the sampling universe

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the industry total

⁵ The solid waste generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual Sludge (HCS), Hazardous

¹ Model facility weighting factor is expressed up to four decimal places

² Numbers may not add due to rounding

³ Compliance total-baseline total

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the industry total

⁵ The solid waste generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual Sludge (HCS), Hazardous Emission Control Dust (HED), Hazardous Off-Specification Production Residual (HOR), Hazardous Solvent Cleaning Residual Sludge (HSS), Hazardous Water Cleaning Residual Sludge (HWS), Nonhazardous Caustic Cleaning Residual Sludge (NCS), Nonhazardous Emission Control Dust (NED), Nonhazardous Off-Specification Production Residual (NOR), Nonhazardous Solvent Cleaning Residual Sludge (NSS), Nonhazardous Water Cleaning Residual Sludge (NWS), Nonhazardous Wastewater Treatment Sludge (NWTS).

¹

¹ Model facility weighting factor is expressed up to four decimal places

² Numbers may not add due to rounding

³ Unweighted total times weighting factor to arrive at the sampling universe

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the industry total

⁵ The wastewater generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual (HCL), Hazardous Solvent Cleaning Residual (HSL), Hazardous Water Cleaning Residual (HWL), Nonhazardous Caustic Cleaning Residual (NCL), Nonhazardous Solvent Cleaning Residual (NSL), Nonhazardous Water Cleaning Residual (NWL).

¹ Model facility weighting factor is expressed up to four decimal places

² Numbers may not add due to rounding

³ Weighted total is unweighted total times 0.5 plus unweighted total for baseline times 0.5 (to account for the wastes that are not hazardous and managed the same as under baseline)

⁴ Weighted total times extrapolation factor 1.7173 (972/566) to arrive at the industry total

⁵ The wastewater generated/facility included in the above table are as follows: Hazardous Caustic Cleaning Residual (HCL), Hazardous Solvent Cleaning Residual (HSL), Hazardous Water Cleaning Residual (HWL), Nonhazardous Caustic Cleaning Residual (NCL), Nonhazardous Solvent Cleaning Residual (NSL), Nonhazardous Water Cleaning Residual (NWL).
